

Flight Paths of the Future?

Cranfield University AIRC

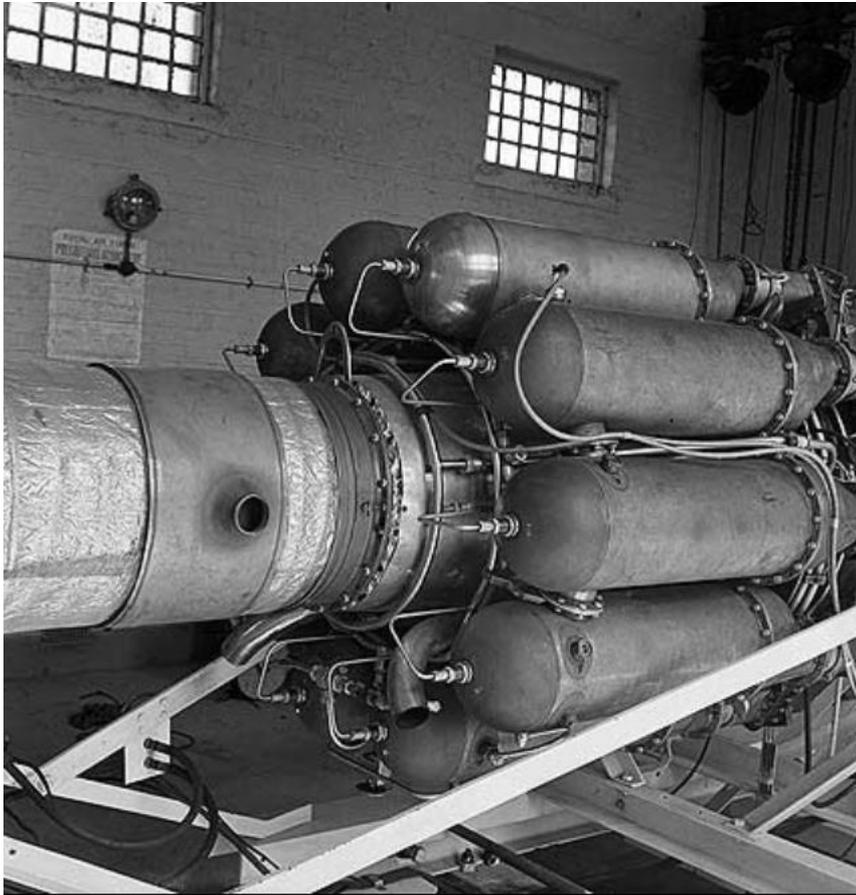

ISABE2017
23rd ISABE Conference

ISABE Conference
7th September 2017
Iain Gray, Cranfield University

Cranfield – College of Aeronautics est 1946

Today teaching and research as important as ever

What is the role of Universities

Teaching and Learning

High Level Apprenticeships

Continuing Professional Development

Executive education

Research

Improving productivity and competitiveness

Graduates with the right skills and mindset to compete in the high-tech global knowledge economy.

Cranfield Airport and Runway – A unique asset

....

The only university in Europe with its own Airport and Runway

.... Ideal for demonstration of ground and flight concepts

Cranfield: a unique university

- Engineering, Science & Management
- Industry-focused, Industry-engaged, Transformational Research
- Exclusively Postgraduate
- Executive & Professional Development, Masters & PhD
 - > 4,500 Postgraduate students
 - > 800 Doctoral students
 - > 20,000 Exec & Professional Development
 - From > 100 countries

Cranfield has Distinctive Strengths

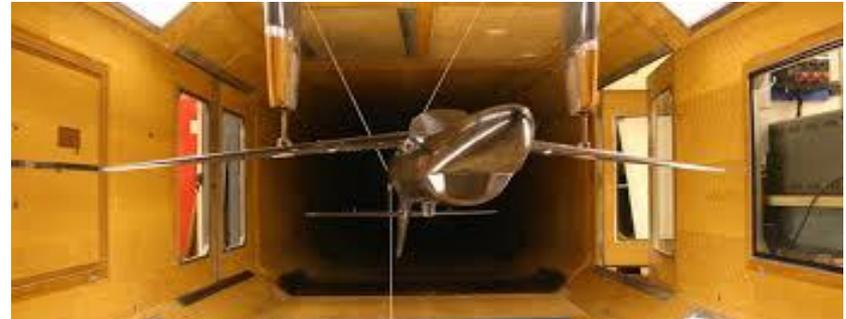

- Aerospace
- Defence and Security
- Energy and Power
- Environment and Agrifood
- School of Management
- Manufacturing
- Transport Systems
- Water

Extensive facilities: Aerospace, Transport & Manufacturing

- Autonomous Systems Laboratory
 - National Wind Tunnel Facility
 - Icing Wind Tunnel
 - Gas Turbine Test Area
 - Aerostructures Assembly & Systems Installation Laboratory
 - Rolls-Royce University Technology Centre (UTC)
 - Aerospace Integration Research Centre (AIRC)
 - Cranfield Aerospace Solutions
-
- also: Aerospace Technology Institute (ATI) based on Cranfield University Technology Park

Extensive facilities: Aerospace, Transport & Manufacturing

- Cranfield Airport
- National Flying Laboratory Centre
- Boeing 737
- Accident Investigation Centre
- Mechatronics Laboratory
- Offroad Laboratory
- Intelligent Mobility Engineering Centre
- Multi-User Environment for Autonomous Systems Integration

Extensive facilities: Aerospace, Transport & Manufacturing

- Centres for Innovative Manufacturing in:
 - Ultra Precision
 - Intelligent Automation
 - Through-life Engineering Services
- Surface Engineering Laboratory
- Engineering Photonics Laboratory
- Additive Layer Manufacturing and Welding Laboratory
- Virtual Reality Laboratory
- Composites

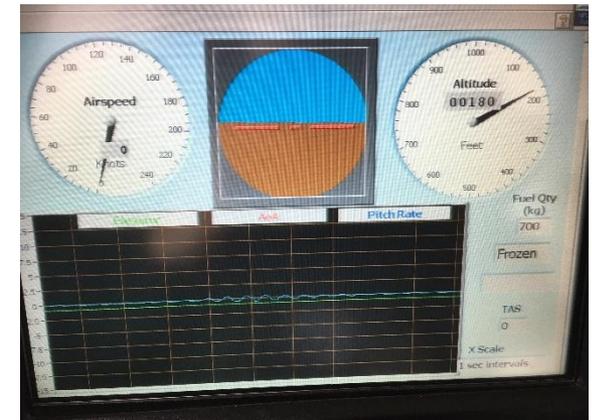

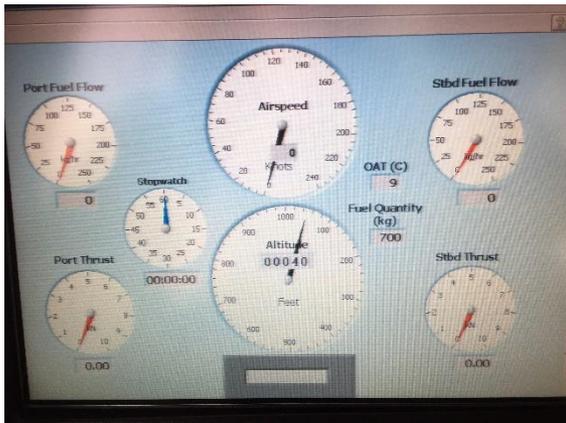

Cranfield Aerospace Education Example

Cranfield's unique student experience,
flying students in our own instrumented aircraft

Cranfield operates a fleet of
three aircraft

Aerospace students at Cranfield
fly in our instrumented aircraft to
learn about, and feel, flight and
ground dynamics, behaviour
and technologies

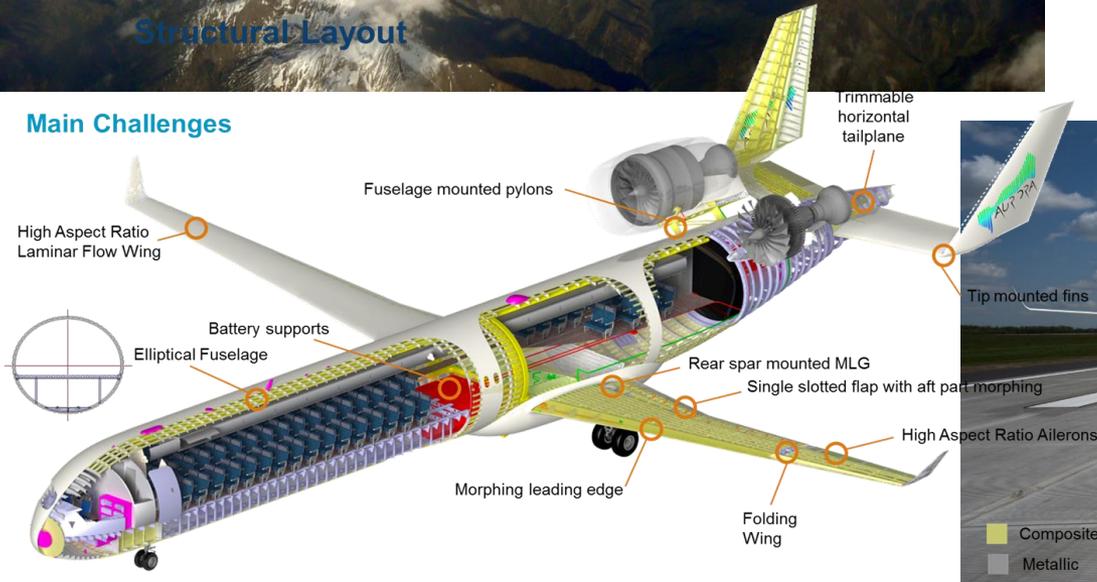

Cranfield Group Design Project Ae16

Main Challenges

Boeing 737-400 Ground based demonstrator

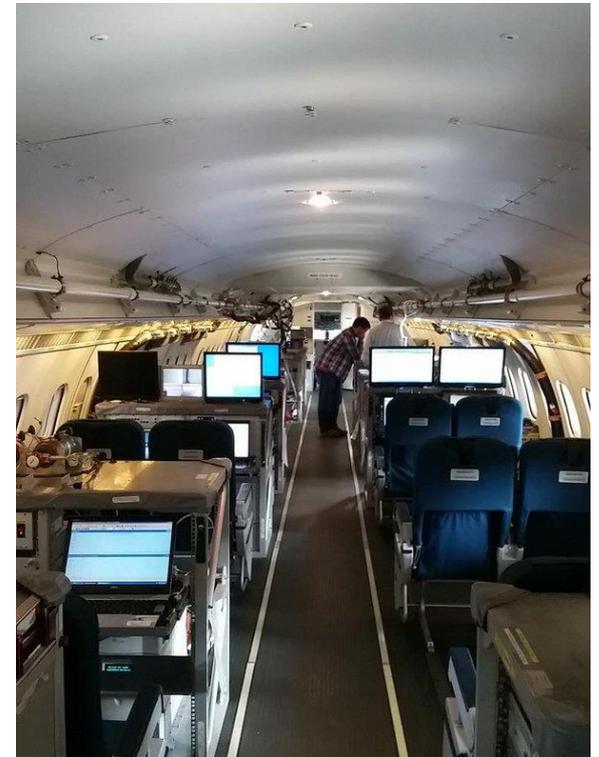

Cranfield University

Home Europe's foremost flying laboratory

FAAM 146 Research Aircraft

Gas Turbine Test facilities:

Analysis
Diagnostics
Energy and the Environment
Life Cycle Costs and Power
Propulsion and Power
Selection of Equipment
Simulation

On-Site Workshop

Many of the parts needed for experimental work are produced in our on-site work shop.

The workshop capability includes CNC milling and a fabrication bay.

Our workshop staff can design and manufacture miniature instrumentation to integrate with test rig components

High Pressure Air Plant

The heart of our air handling capabilities are two Ingersoll-Rand centrifugal compressors. These feed to our test cells via a high pressure ring main at up to 4kg/s at 20Bar.

The labs also house the unique 'Pebble Bed' high enthalpy heater. This can deliver non-vitiated air at up to 1850K, 3kg/s at 16Bar.

Our Facilities

Our test facilities include a number of high speed drive trains.

We can supply 750kW at up to 18,000rpm using the variable speed, reversible electrical drive. We also provide shaft power using gas turbines which can deliver over 800kW at up to 45,000rpm. These are helicopter engines modified for ground running on our test beds.

In the past these have typically been used to drive high speed compressors, gearboxes and generator systems.

Our wind tunnel facilities are fully instrumented with state of the art SPIV systems for high fidelity flow visualisation experiments.

Shown here is our experimental work on the aerodynamics of complex aero-engine intakes

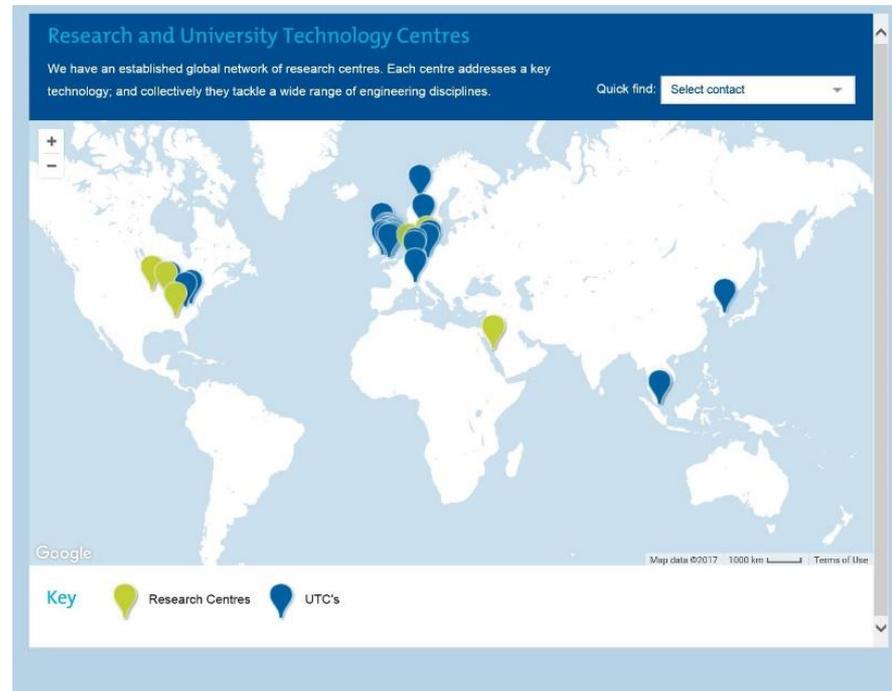

High Speed Drive Trains

Low Speed Aerodynamics

Rolls Royce University Technology Centre UTC

- “Unlike our major competitors, Rolls-Royce does not have a large corporate research centre. Instead, we have made our selves totally dependent on our University Technology Centres for our future technology. Our global university partners more than rise to this challenge”
- Ric Parker, former Rolls-Royce Director of Research and Technology

Source Rolls Royce

The Rolls-Royce UTC at Cranfield

- Industry-academia partnership since 1998
- From 'Performance' to 'Systems Design, Integration & Performance'

“Core competence our ability to undertake detailed studies involving highly integrated, aero-thermal, multi-disciplinary models, to improve understanding of power plant and sub-system design, integration and performance in the context of the product’s life cycle and mission.”

The Rolls-Royce UTC at Cranfield

- **Rolls-Royce customers:**
 - ✓ **System Design Global Function**
 - **Global Performance Function**
 - **Installations Aerodynamics**
 - ✓ **Engineering for Services**
 - ✓ **Systems Engineering**
 - ✓ **Future Programmes Engineering**
 - ✓ **Future Technologies Group**
 - ✓ **Marine**
 - ✓ **+++**

- **Conduit for Rolls-Royce to place research work with other groups and departments at Cranfield (50+ projects since 2010 worth >£1.8M)**

- **Collaboration through EU-funded research**

- **Additional gearing through ATI, IUK, EPSRC and other funding sources**

Aerospace Integration Research Centre

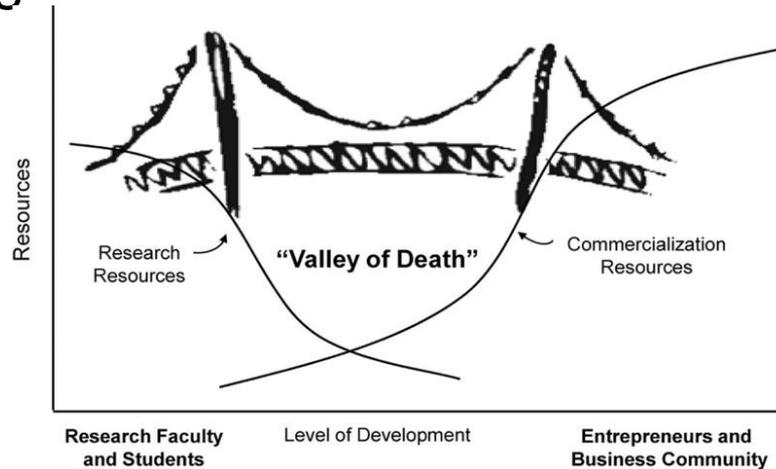

What is the AIRC?

- A £35m investment by Cranfield, HEFCE, Rolls Royce and Airbus
 - Encouraging collaboration between academia and industry
 - A unique research facility for integration of complex aerospace solutions
 - Operational since January 2017
- Capacity
 - Over 2000 sq m lab space
 - Secure office space for 60 permanent hot desks
 - Further collaboration space for 100+ people
 - Airbus and Rolls Royce Offices for 6-8 people
- Simulators and Vision
 - Flight and ATM simulator
 - Virtual wind tunnel facility being developed
 - Advanced visualisation/presentation suite used for intensive workshops

Greater readiness of research

- Facilitating route to commercialisation of research

- Achieving higher “technology readiness”
 - Greater integration of technology within system
 - More representative environments
 - Whole end-to-end processes rather than individual activities

Aerospace Integration Research Centre AIRC

- Addressing:
 - New and novel aircraft concepts with advanced power and propulsion concepts
 - Wider system integration with air transport management and business model integration

Greater integration of product

- Benefits from optimising the whole rather than just the parts
- Considering technology, process and business models
- Grand challenges
 - More efficient and effective solutions
 - Improved timescales and costs

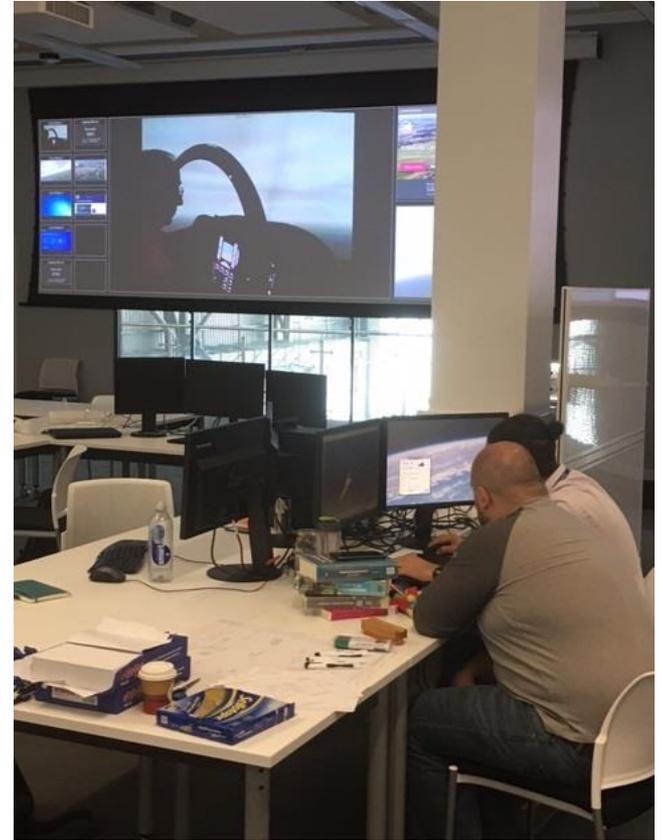

Aerospace Integration Research Centre AIRC

- IDEAS Space
- Large Open Lab
- Flight Simulator
- Air Traffic Management Lab
- Aerospace Autonomy Lab
- Intelligent Assembly Lab

Aerospace Integration Research Centre IDEAS SPACE

More than just a building – the wider capability

AIRC – the building

LPA simulators and High Performance computing

Icing and wind tunnels

World renowned Management School

Airport – runway 1.8km

National Flight Laboratory:
2 Jetstream 31s, UAV surrogate, Bulldog, other

Manufacturing and auto assembly

Cranfield Airport

Cranfield Aerospace: commercial arm with EASA and UK MoD approvals

Large scale Gas Turbine test area

Intelligent Mobility Engineering Centre and Multi User Environment for Autonomous vehicle innovation

Air Transport Management department

Concept of operation

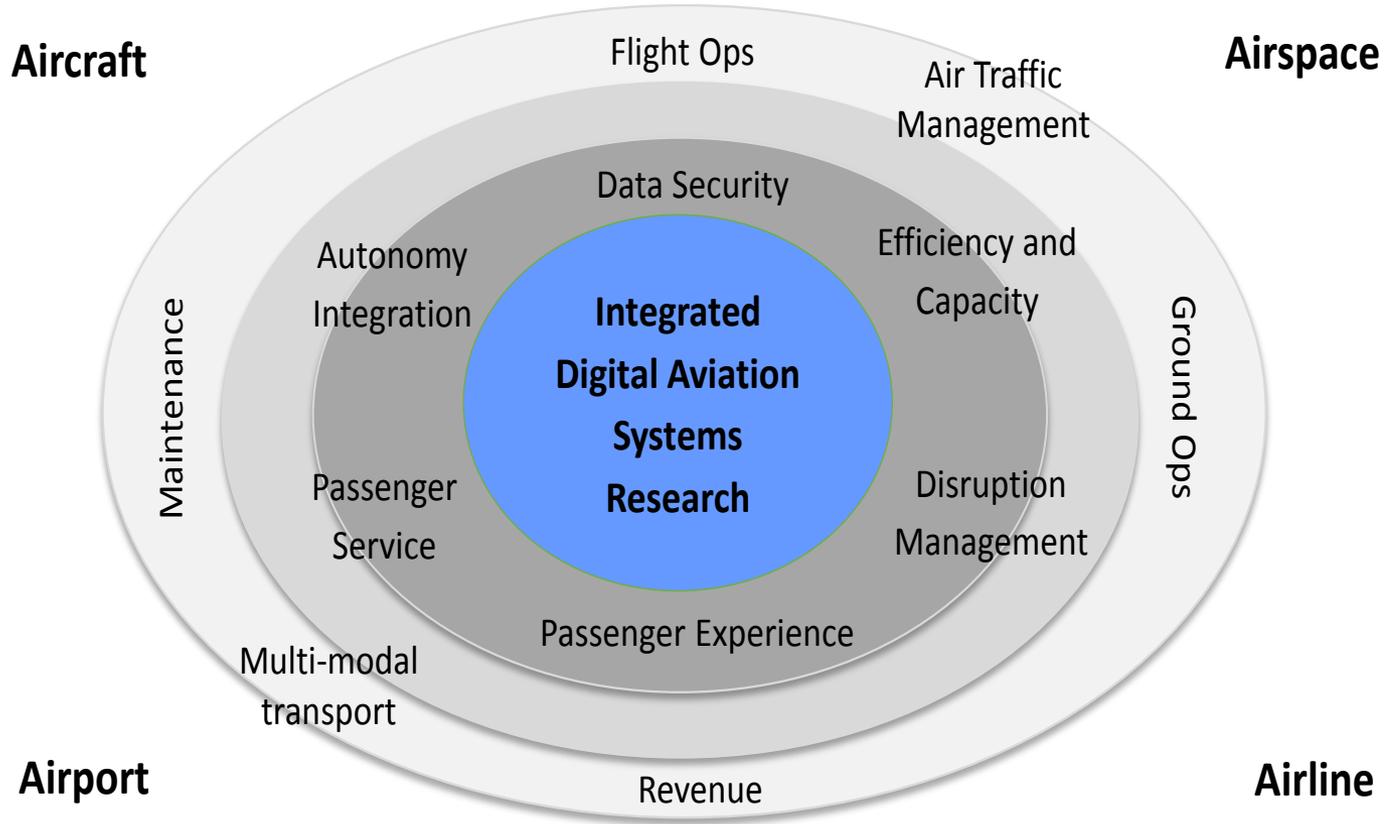

- An integration environment - integration of distributed research across UK and wider
 - Surrogate airframer for Rolls Royce, surrogate component supplier for Airbus
 - Provide a neutral ground for exploration and experimentation
- Themes:
 - Aircraft/ propulsion of the future
 - Smart and connected aerospace solutions
 - Aerostructures of the future
 - High value design

DARTeC Value Proposition

Integrated Digital Aviation Systems Research

AIRC is the first step on a journey...

- Air vehicles of the future
 - Airspace Management of the future
 - Airline of the future
 - Airport of the future
- AIRC – Aerospace Integration Research Centre
- DARTeC - Digital Aviation Research and Technology Centre
-
- A diagram consisting of two large right-facing curly braces. The top brace groups the first two items of the list: 'Air vehicles of the future' and 'Airspace Management of the future'. The bottom brace groups the last two items: 'Airline of the future' and 'Airport of the future'. To the right of the top brace is the text 'AIRC – Aerospace Integration Research Centre'. To the right of the bottom brace is the text 'DARTeC - Digital Aviation Research and Technology Centre'.

Cranfield's role Airport of the Future Masterplan

Cranfield Masterplan
May 2016

Cranfield
UNIVERSITY

DARTeC Facility

Drawing together Cranfield's unique Assets, Capability and Experience to ...

Establish a dedicated Digital Aviation Systems Research and Technology Centre (DARTeC) at Cranfield University to:

- Provide a technology demonstration and maturation environment (Physical + Virtual)
- Focus on the advancement of digital systems across the full aircraft + airport + airspace spectrum. .
- Address door to door passenger journey with focus on aviation elements
- Leverage both the Centre's assets plus those of the global Digital Aviation R&T sector to provide integrated technical and business systems solutions for accelerated market implementation
- Leverage UK and international research funding initiatives to scale up Digital Aviation Research and Technology Development activities

737-400 Flying Demonstrator

Research Hangar Lab

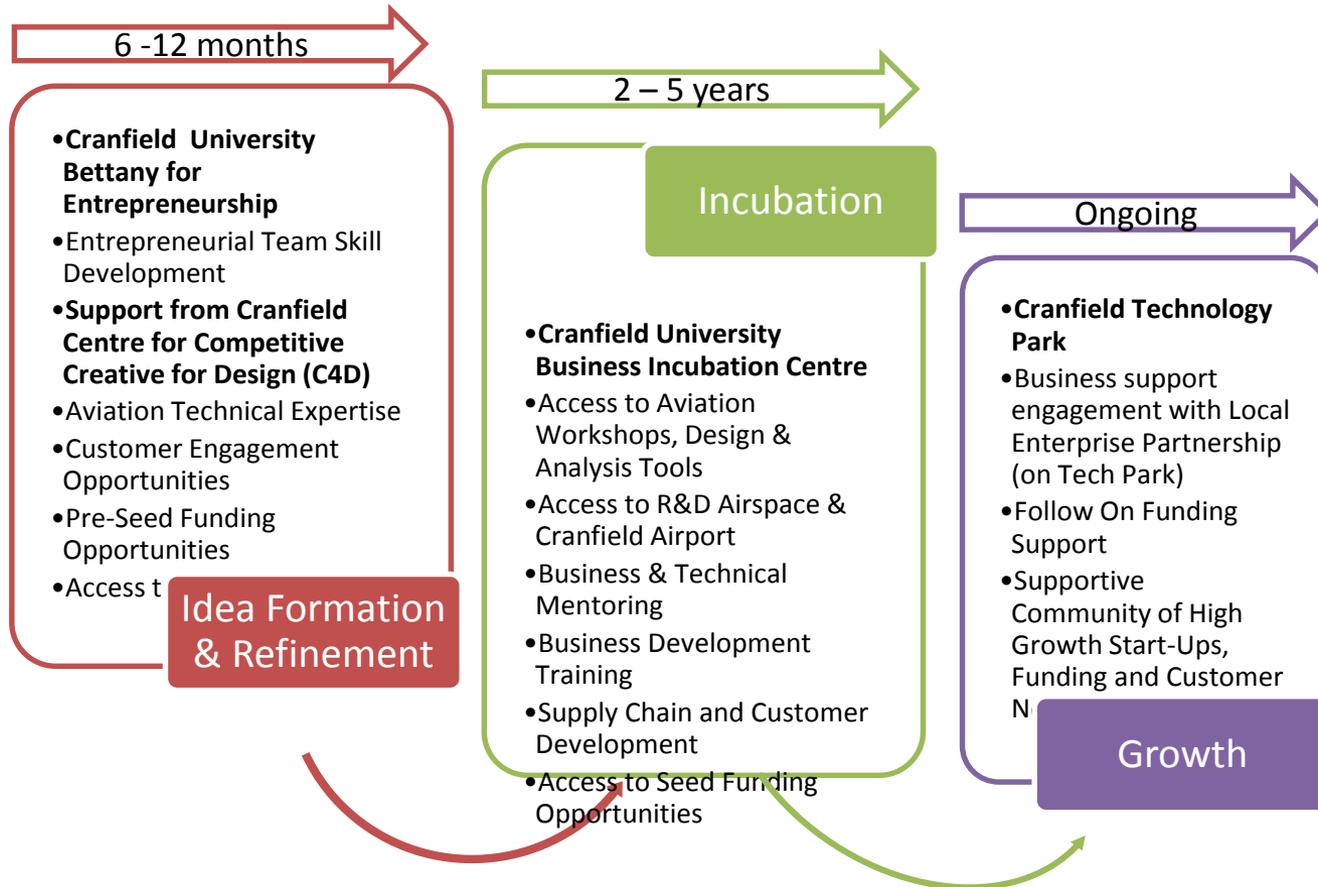

Access Operational Airport

Radars Enabled Research Airspace

Reconfigurable Digital and Physical R&T Labs

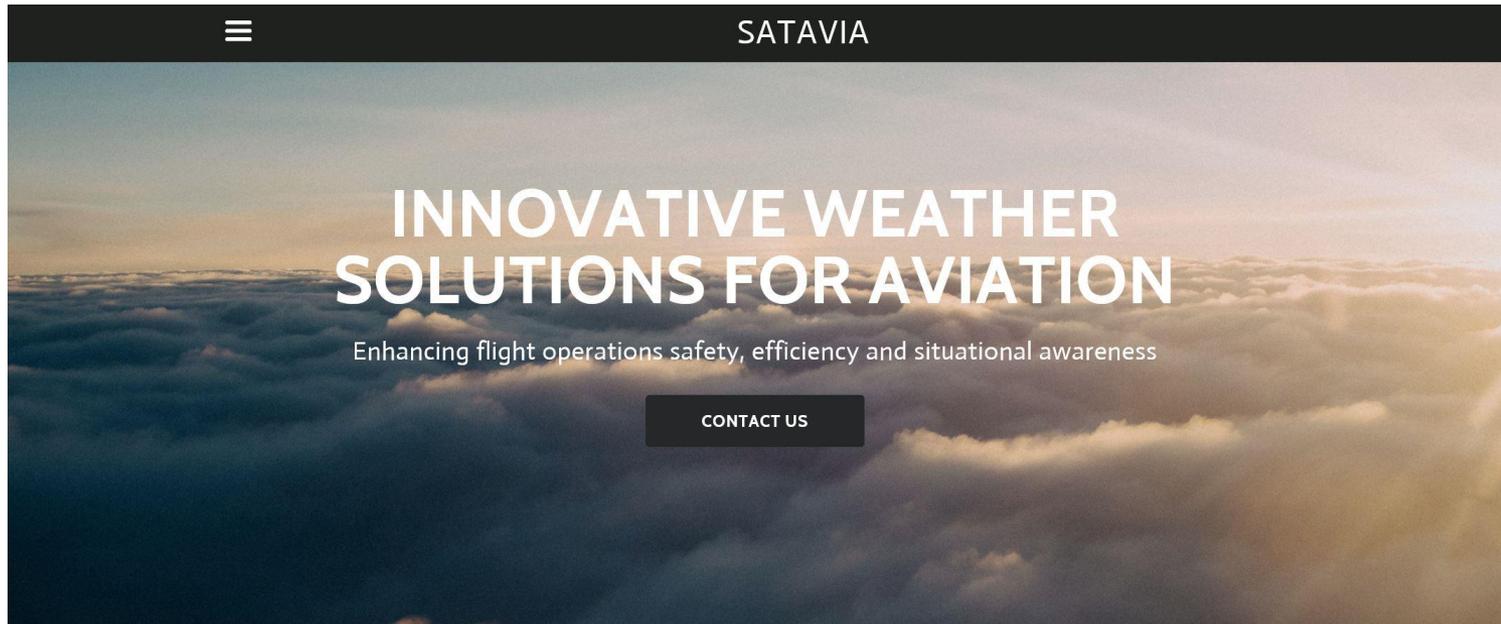

Cranfield Aviation Accelerator

Satavia : The global leader in digital environmental intelligence

What does the future look like?

- We are on the cusp of a 3rd Revolution in Aerospace
- No one organisation can do everything – new ways of working with partners across globe being established
- Cranfield can play a key role.

Trigger points for ACARE change

Increase extent of inter-disciplinary within and outside classical aerospace

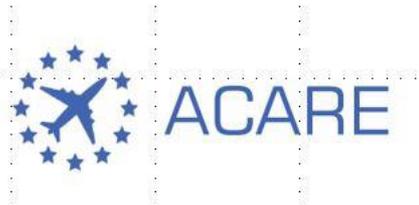

New system concepts, e.g. more electrical flying

RPAS / UAS development and market take-up quicker than initially anticipated

Change in light of new technologies

New materials and manufacturing processes vital for manufacturing industry

Dynamic developments in the field of IT, e.g. big data, automation, digitalisation and virtualisation

Systems Integrator at research level FLAVIIR Subscale Demonstrator

The BWB concept

CRANFIELD
AEROSPACE

NASA-Boeing X-48C blended wing body technology demonstrator awaits its first flight from Rogers Dry Lake on a hot August morning at Edwards Air Force Base, Calif

Jetstream - ASTRAEA

First surrogate 'unmanned' flight in civil airspace

Development of electric aircraft?

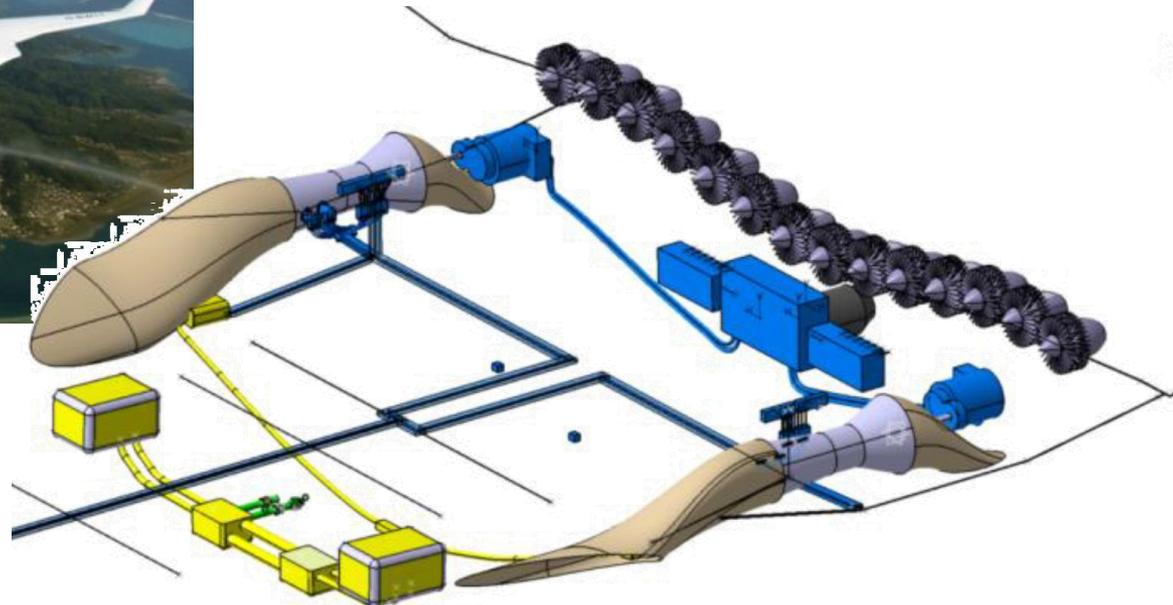

Can this be a scaled technology vision?

Hybrid electric benefits – Opens up more design freedoms

What does the future look like?

We are on the brink of a revolution in aerospace
Cranfield University AIRC is helping to shape it
